

**MARYLAND HISTORICAL TRUST
DETERMINATION OF ELIGIBILITY FORM**

NR Eligible: yes ☒
no ☐

Property Name: Building 106D Indian Head NSWC Inventory Number: CH-491
Address: _____ City: Indian Head Zip Code: _____
County: Charles USGS Topographic Map: Indian Head
Owner: U.S. Navy Is the property being evaluated a district? ☐ yes
Tax Parcel Number: n/a Tax Map Number: n/a Tax Account ID Number: n/a
Project: _____ Agency: U.S. Navy
Site visit by MHT staff: ☒ no ☐ yes Name: _____ Date: _____
Is the property is located within a historic district? ☒ yes ☐ no

If the property is within a district District Inventory Number: CH-491
NR-listed district ☐ yes Eligible district ☒ yes Name of District: Indian Head Naval Powder Factory HD
Preparer's Recommendation: Contributing resource ☒ yes ☐ no Non-contributing but eligible in another context ☐ yes

If the property is not within a district (or the property is a district) Preparer's Recommendation: Eligible ☐ yes ☐ no

Criteria: ☒ A ☐ B ☒ C ☐ D Considerations: ☐ A ☐ B ☐ C ☐ D ☐ E ☐ F ☐ G ☐ None

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles Co. Maryland

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 106D is a one-story, one-bay, rectangular, brick building raised on a concrete slab foundation. The front-gable roof is sheathed in asphalt shingles. The south elevation exhibits a centrally-located metal, double-door.

Building 106D was constructed in 1944 as a storage magazine for energetics and is currently abandoned. Building 106D exhibits few modifications and possesses integrity of design and materials.

Building 106D was constructed in 19044 as an energetics storehouse at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Building 106E is a one-story, one-bay, rectangular, poured concrete structure. The building features bermed earth sides and roof with protruding metal vent stack. The south elevation exhibits a centrally-located metal, double-door, set within the front façade of the structure.

Building 106E was constructed in 1944 as a storage magazine for chemicals. The building is currently used for storage. Building 106E exhibits few modifications and possesses integrity of design and materials.

Building 106E was constructed in 1944 as a storehouse at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 158 is the ruins of the reworking plant which was gutted by fire. The ruins of the two-story, twelve-bay, rectangular, brick structure consists of six separate portions separated by a party wall. All the window and door openings as well as roff were destroyed by the fire. The structure is a gutted shell.

Building 158 was constructed in 1900 as a reworking plant at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. The building was gutted by fire and is currently in a state of disrepair. Building 158 no longer possesses sufficient integrity of design, setting materials, feeling, and association to convey its significance with the Naval Powder Factory..

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 159A is a one-story, two-bay, rectangular, corrugated-metal structure raised on a concrete block foundation. The building is surmounted by a gable roof sheathed in corrugated metal. The building features six-over-six-light, double-hung wood-sash windows and nine-light, fixed wood-sash windows. The west elevation exhibits a centrally-located metal, double-door accessed by a loading dock.

Building 159A was constructed in 1944 as an annex to the Pellet House Building 159. The building is currently used for inert storage. Building 159A exhibits few modifications and possesses integrity of design, materials and setting.

Building 159A was constructed in 1944 as an annex to building 159 at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 159A facilitated the testing of mechanical equipment during World War II and was not directly related to powder production. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 163 is the ruins of a former dehydrating house which was destroyed by fire ca.1975. The north wing of the existing structure contains the poured concrete foundation ruins of the building. The south wing of the building features a one-story, two-bay, rectangular, corrugated transite structure built on the foundation of the original dehydrating house. The structure terminates in a parallel gable roof sheathed in corrugated metal. The east elevation of the south wing exhibits two overhead wood sliding track doors. Building 163 is composed of the ruins of a former building and new construction. The original building is demolished and no longer possesses integrity of design, materials, feeling, or association.

Building 163 was constructed in 1919 as a dehydrating house at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 163 contains the foundation ruins of a former dehydrating house. No other original portions of the building remain. Building 163 no longer possesses sufficient integrity of design, setting, materials, feeling, and association to convey its significance with the Naval Powder Factory.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 171 is a two-story, rectangular, brick building composed of three additions. All the windows have been in-filled with glass block. A metal fire escape provides access to the upper floor. The building terminates in a cross-gable roof with monitor clad with modern standing seam metal panels.

Building 171 was constructed as a change house and has recently been renovated for use as offices. All windows have been replaced with brick and glass block in-fill. Doors have been in-filled or replaced with metal fire doors. The roof has been sheathed with standing seam metal. Modifications have removed primary character defining features of this building and it no longer appears as a change house. Building 171 no longer possesses integrity of design, materials, feeling, and association.

Building 171 was constructed in 1909 as a change house at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 171 was a personnel support structure that was not important for its association with the Powder Factory base line. Building 171 no longer possesses sufficient integrity of design, materials, feeling, and association to convey its significance with the Naval Powder Factory.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 182 is a two-story, three-bay, rectangular, wood-frame, corrugated-metal structure that rests on a brick pier foundation. The building is surmounted by a gable roof sheathed in standing seam metal. The east gable end elevation exhibits a pair of single wood doors accessed by a loading dock adjoining a railroad siding. A one-story shed roof addition was appended to the south elevation of the building. The building is severely deteriorated.

Building 182 was constructed in 1910 as a powder dry house and is currently used for inert storage. Building 182 is the most severely deteriorated of six almost identical dry houses of which five are in good condition and possess excellent integrity. Building 182 has received an addition to its south elevation.

Building 182 was constructed in 1910 as one of six dry houses at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 194A is a one-story, rectangular, four-by-eight bay, wood-frame building clad with corrugated transite siding. The building is raised on a concrete slab. The structure terminates in a gable roof sheathed in corrugated transite panels. The building is accessed by two single-light, metal doors located on the east elevation. A small shed roof porch, supported by five metal posts covers a portion of the east elevation. The building features six-light center pivot wood-sash windows; some windows have been in-filled with plywood.

Building 194A was constructed in 1945 and currently is used for offices. Building 194A exhibits few modifications and possesses integrity of design and materials.

Building 194A was constructed in 1945 at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles Co. Maryland

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 286 is a two-story, rectangular structure composed of three flat-roofed sections. Two sections are additions to the original structure that was a rectangular common-bond, brick building. The brick section is characterized by recessed brick panel bays and a flat, parapet roof. All former window bays are in-filled with brick and corrugated metal. The north elevation exhibits a one-story, poured concrete addition. Multiple single and double fire doors provide access to the building.

Building 286 was originally constructed as a rectangular brick structure. Two additions have changed the form, massing, and design of the original structure. Metal wall and roof ventilators and the in-fill of window and door openings have compromised the building's historic design and materials. Building 286 exhibits numerous modifications and alterations that have compromised the building's historic design and materials.

Building 286 was constructed in 1918 as a cartridge primer manufacture building at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. The building no longer possesses sufficient integrity of historic design and materials to convey its association with the Naval Powder Factory during its period of significance.

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles Co. Maryland

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 292 is a two-story, rectangular, four-by-fourteen bay, brick industrial building. A poured concrete foundation forms a water table. The building features multi-pane industrial windows with pivoting center sections. The building terminates in a flat roof with parapet wall on the southwest gable end. Buildings 292A and 292B, starter houses, were appended to the building in 1941. A one-story corrugated metal addition was added to the roof of the building forming a third-story in 1949. The interior of the building was extensively altered to accommodate its modern function as a rocket motor assembly and inspection facility.

Building 292 was constructed as a two-story, rectangular poaching and blending house. The building has received several modifications including the addition of Buildings 292A and 292B, and the addition of a third story to update it as an assembly shop. The interior was renovated to accommodate the assembly shop. Due to these modifications, Building 292 no longer retains its original massing.

Building 292 was constructed in 1918 as a poaching and blending house and motor preparation and inspection building at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 298 is a one-story, rectangular, one-bay wood-frame corrugated-transite building. The building rests on a poured concrete foundation with a corrugated metal roof. The building is accessed by a central double metal door on the north elevation. A raised poured concrete loading dock supported by concrete piers connects the building to the adjoining buildings. Corrugated transite siding has obscured all the original fenestration of the building.

Building 298 has been clad in corrugated-transite siding obscuring important character defining features and surfaces such as windows and siding. The building no longer possesses integrity of design or materials.

Building 298 was constructed in 1919 as a glazing and screening house at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 298 no longer possesses sufficient integrity of historic design or materials to convey its significance with Naval Powder Factory during its period of significance.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 299 is a one-story, rectangular, three-bay, brick building. The building rests on a poured concrete foundation terminating in a flat roof with parapet wall. The building is accessed by a central, double, metal door on the north elevation. The north and south elevations feature multi-light industrial windows with pivoting sash. On the north elevation a shed roof porch shelters a concrete-slab loading platform.

Building 299 was constructed in 1919 as an ammonia compressor house and was recently gutted and renovated to house the base technical library. All original metal sash windows were in-filled with glass block. Entry doors were replaced with metal fire doors. The interior was renovated to accommodate office and back stack spaces.

Building 299 was constructed in 1919 as an ammonia compressor house at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Building 302 is a two-story, rectangular, seven-bay, brick building. The building rests on a poured concrete foundation, terminating in a flat roof with parapet wall. Brick partition walls with parapets divide each bay. The building features two-over-two light, double hung, wood-sash windows on the first floor and one-by-one sliding track windows on the second floor. The second floor porch of the building has been enclosed with horizontal vinyl siding. A concrete-slab loading platform is located on the north elevation of the building. The interior of the building has been renovated for office use.

Building 302 was constructed as an industrial manufacturing building and has recently been renovated for office use. For the renovation, the second story porches were enclosed and all windows were replaced. The inside of the building was gutted for office space. The building was also detached from the adjacent condenser houses that were important to the solvent recovery process. Modifications have obscured the original design and function of Building 302 and it no longer possesses integrity of design.

Building 302 was constructed in 1918 as a solvent recovery house at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. The building has been renovated for use as offices. Building 302 no

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 439 is a one-story, one-bay, poured concrete magazine built into a hill. The front elevation exhibits a poured concrete wall with a small blast-proof metal door. A metal flue projects through the earth above. Building 439 possesses integrity of design and materials.

Building 439 was constructed in 1941 as a magazine at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 439 was used as a small arms armory and was not related to the storage of smokeless powder. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Documentation on the property/district is presented in:

Phase I Cultural Resources Survey of Stump Neck Annex and Supplemental Architectural Investigations, Indian Head Naval Surface Warfare Center, Charles Co. Maryland

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 444 is a one-story, rectangular, four-bay brick building. The building rests on a poured concrete foundation, terminating in a gable roof clad with asphalt shingles. Three large metal ventilators rise from the roof peak. The building features multiple two and three-light wood doors and four-light awning windows. The building has numerous vents and ductwork extending from the rear (south) and side elevations attached to air condition and filtration units. These units and ducts mask the wall of the building. Numerous windows have been in-filled with plywood and metal ventilators.

Building 444 was constructed as a one-story manufacturing building. Various modifications to the building including the addition of ventilators, ductwork, and compressor units have obscured the original function and historic surfaces and features of this structure. Building 444 no longer possesses integrity of design or materials.

The appearance of Building 444 has been severely altered with addition of numerous HVAC systems. Building 444 was construed in 1941 as a rest paper manufacture laboratory at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 444 no longer possesses sufficient integrity of design or materials to convey its significance with the Naval Powder Factory.

Building 447 is a one-story, one-bay, poured concrete structure, partially constructed below ground. The building terminates in a front gable roof clad with rolled asphalt tar paper. The primary entrance contains a four-light wood door with raised panels.

Building 447 was constructed in 1941 as a well water meter house at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 447 is a minor infrastructure support building. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 448 is a one-story, rectangular, two-bay, woo-frame structure clad with corrugated transite panels. The building rests on a poured concrete foundation, terminating in a corrugated metal gable roof with three circular metal ventilators. The building features a pair of replacement metal double doors on the front (south) elevation. A concrete-slab loading platform on concrete piers is located on the south elevation of the structure. Building 448 is identical to Building 449.

Building 448 was constructed in 1941 as a storehouse at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 448 was constructed for use as a general storehouse not directly associated with smokeless powder production. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 456 is a two-story, rectangular, eight-bay, brick building. The building rests on a poured concrete foundation, and terminates in an asphalt-shingle gable roof. A two-story, wood-frame, shed-roofed porch is located on the front (north)elevation. A metal walkway is located on the second floor level of the rear (south) elevation. The building features replacement metal double doors and replacement one-over-one-light, double-hung, metal-sash windows on the first and second floor levels. The original shed roof has been replaced with a gable roof. The building currently is used as an electrical fabrications building. Modifications have removed virtually all character defining features of this building and it no longer possesses integrity of design or materials.

Building 456 was constructed in 1941 as a solvent recovery house at Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 456 has been significantly altered and no longer possesses sufficient integrity of design, materials, feeling, and association to convey its significance with the Naval Powder Factory.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 482 is a two-story, rectangular, six-bay, brick building. The building rests on a poured concrete foundation and terminates in an asphalt-shingled gable roof. The walls have been covered with stucco. The building features replacement metal double doors and replacement one-by-one-light, sliding-track, metal-sash windows. A two-story, concrete-block addition with asphalt-shingled gable roof is appended to the west gable end of the building.

Building 482 was constructed as a rectangular powder-picking house. The building currently is used as Safety Office Building. It includes the wholesale replacement of all original doors and windows. The exterior walls have been covered in stucco and a concrete masonry unit addition has been added to the west elevation. These modifications have removed or obscured character defining features and surfaces of the building and it no longer possesses integrity of design or materials.

Building 482 was constructed in 1941 as a powder-picking house at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 482 has been significantly altered and no longer possesses sufficient integrity of design or materials to convey its significance with the Naval Powder Factory.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 490 is a two-story, L-shaped, wood-frame building raised on a concrete block foundation. The building is six bays wide and six bays deep and is surmounted by a flat roof with overhanging eaves. The walls are finished with sheet metal panels. The east elevation exhibits a one-story, three-bay, shed roof porch. A metal door with a single light is centrally located on the porch. The building features replacement one-over-one-light, metal-awning sash on the first and second stories.

Building 490 was constructed in 1941 as a supervisor's office. The building currently is used as an engineering office. Building 490 exhibits contemporary changes to all of its windows, doors and wall surfaces. These modifications have removed or obscured character defining features of the building and it no longer possesses integrity of design or materials.

Building 490 was constructed in 1941 as an office at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 490 is a simple utilitarian support building that no longer possesses sufficient integrity of design, materials, feeling, or association to convey its significance with the Naval Powder Factory during the period of significance (1900-1945).

Description of Property and Eligibility Determination: (Use continuation sheet if necessary and attach map and photo)

Building 491 is a one-story, T-shaped, wood-frame and concrete-block building raised on a concrete-block foundation. The building is nineteen bays wide and five bays deep and is surmounted by a side-gabled, corrugated-metal roof with ventilators. The walls are finished with corrugated metal and fiberglass panels. The north elevation exhibits a central, eight-bay, front-gabled block with original four-light, wood-sash hopper windows. All other windows have been replaced within-over-one-light, double hung, metal-sash units. The building contains multiple entrances that feature metal fire door replacement units. One-story, gabled-roof, concrete-block additions have been added to the north and west elevations.

Building 491 was constructed in 1941 as a change house. The building currently is used as an electromechanical remover building. Building 491 exhibits select modifications to its windows, siding, and doors.

Building 419 was constructed in 1941 as a change house at the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Building 629 is a one-story, rectangular, wood frame building raised on concrete foundation. The building is one bay wide and one bay deep and is surmounted by a low-pitched, gable roof. The walls are clad with lapped wood siding. A wood panel, nine-light, wood door is centrally located on the north elevation. Building 629 was constructed in 1946 as a ventilator fan house and continues to be used for that purpose. The building has received few modifications and possesses integrity of design and materials.

Building 629 was constructed in 1946 as a ventilator fan house for the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Building 629 is a utilitarian support structure that was constructed after the period of significance (1900-1945) for the Powder Factory. It is not important for its association with the Powder Factory base line.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Building 630 is a one-story, rectangular, wood-frame building raised on concrete foundation. The building is one bay wide and one bay deep and is surmounted by a front-gable roof. The walls are clad with lapped wood siding. A wood panel, nine-light, wood door is centrally located on the north elevation. Building 629 was constructed in 1945 as an alcohol pump house and continues to be used for that purpose. The building has received few modifications and possesses integrity of design and materials.

Building 630 was constructed in 1945 as an alcohol pump house for the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Building 645 is a one-story, rectangular, poured-concrete building raised on a concrete foundation. The building is one bay wide and one bay deep and is surmounted by a flat concrete roof. A metal plate door with strap hinges is centrally located on the north elevation. Building 645 was constructed in 1945 as an x-ray storage building and currently is used for small arms storage. The building has received few modifications and possesses integrity of design and materials.

Building 645 was constructed as an x-ray storage building for the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. NSWC, Indian Head in consultation with MHT agree that the building contributes to the Naval Powder Factory District.

Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

Facility 648 consists of ten ca. 1950 cylindrical metal tanks arranged in two rows of five. Each tank is raised on a concrete foundation within a concrete wall catch basin. The tanks appear to be in good condition and possess integrity of location and design.

Facility 648 was constructed as a group of storage tanks for the Naval Powder Factory (1900-1945). The Naval Powder Factory is an industrial facility significant as the first major chemical factory operated by the navy and an important supplier of smokeless powder during World Wars I and II. Facility 648 provided utilitarian support and was not important for its association with the Powder Factory base line.
